Introduction to Artificial Intelligence

Tutor Group ...

18th & 19th of September 2024

TAs: ... & ...
Tutor: ...

TODAY'S AGENDA

01	**SENTIMENT CHECK**	How do you feel about the course so far?
02	**GROUP PRESENTATIONS**	5 minutes presentation with slides on Literature Assignment
03	**EXERCISE**	Exercise on Computer Basics (individual assignment)
04	**FOR NEXT TIME...**	5-min presentation on your approach for feedback.

01

SENTIMENT CHECK

HOW DO YOU FEEL ABOUT THE COURSE SO FAR?

… AND WHY?

02

GROUP PRESENTATIONS

03

EXERCISE

TASK

Step 1: Create a directory named comparison_exercise.

Step 2: Create two text files, fileA.txt and fileB.txt, each containing a different set of 10 sentences about any topic (in our Slack tutor group).

Step 3: Find the words that are unique to each file and list them separately.

Step 4: Create a combined frequency list for all unique words from both files.

Step 5: Save the unique word list as unique_words.txt, the combined frequency list as combined_frqList.txt.

Step	Windows Commands (PowerShell)	Mac/Linux Commands (Bash)
1. Create Directory and Navigate	`mkdir comparison_exercise` `cd comparison_exercise`	`mkdir comparison_exercise` `cd comparison_exercise`
2. Create Text Files		`touch fileA.txt fileB.txt`

3. Add Content to Files	`echo "This is an example sentence in file A." > fileA.txt`
	`echo "It contains words that may not be in file B." >> fileA.txt`
	`echo "This is a different example sentence in file B." > fileB.txt`
	`echo "Some words are unique to file B and some to file A." >> fileB.txt`
		`echo "This is an example sentence in file A." > fileA.txt`
		`echo "It contains words that may not be in file B." >> fileA.txt`
		`echo "This is a different example sentence in file B." > fileB.txt`
		`echo "Some words are unique to file B and some to file A." >> fileB.txt`

4. Find Unique Words	`$uniqueA = (Get-Content fileA.txt -Raw).Split(" ")	Sort-Object
5. Create Combined Frequency List	`$combinedFrequency = $combinedUnique	Group-Object

bash
```
tr '[:space:]' '[\n*]' < fileA.txt | sort | uniq > uniqueA.txt
```

bash
```
cat uniqueToA.txt uniqueToB.txt > unique_words.txt
```

```
tr '[:space:]' '[\n*]' < unique_words.txt | sort | uniq -c | sort -nr > combined_frqLi
```

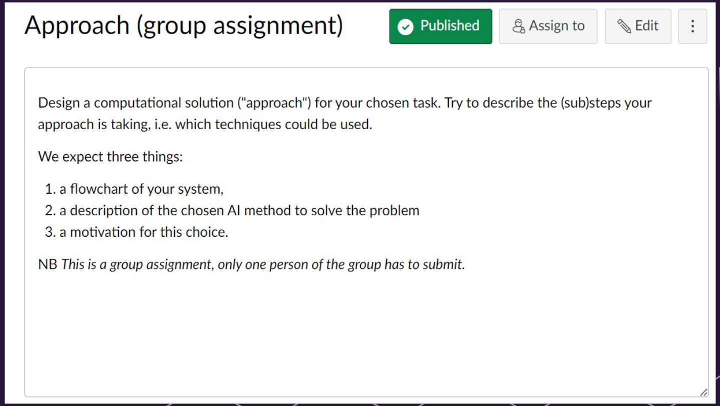
04

FOR NEXT TIME...

A 5 minutes presentation WITH SLIDES

On the Approach Assignment.

No presentation, no feedback before the assignment' submission :)



Approach (group assignment)

Published | Assign to | Edit

Design a computational solution ("approach") for your chosen task. Try to describe the (sub)steps your approach is taking, i.e. which techniques could be used.

We expect three things:

1. a flowchart of your system,
2. a description of the chosen AI method to solve the problem
3. a motivation for this choice.

NB *This is a group assignment, only one person of the group has to submit.*
