

Academic Writing (BETA)

Seminar 3

Anna Martonfi, Paul Robertson, Alessandro Cangelli, Adam Frick, Alison McRae, Eilidh Webster; *Dept. of Language, Literature & Communication // Vrije Universiteit Amsterdam*

Today's Programme

- ▶ Paraphrasing
 - ▶ Plagiarism
 - ▶ Referencing style
-

But first: writing exercise from
the week before

Subject-verb agreement (1)

- ▶ Dogs bark. (I, you (sg & pl), we, they)
- ▶ A dog bark~~s~~. (he, she, it)

Subject-verb agreement (2)

- ▶ Every single command performed on computer systems come down to a set of mathematical instructions.
- ▶ Their use is no more limited to professionals in fields where speed and accuracy is fundamental.
- ▶ How data is organised in computer systems.

Grammar

- ▶ a huge socio-economic impact on the modern society
- ▶ The field studies also information technology.
- ▶ Programs such as autonomous cars the human factor who could become rather dangerous if under the influence of alcohol,...
- ▶ ChatGPT an artificial chatbot, which is a computer programs that can mimic human conversation by interpreting and generating natural language.

Grammar of words

- ▶ Machine learning can assist researches in the capturing of information
- ▶ more broad

A lot of

- ▶ There is a lot of information on the internet.
- ▶ Nowadays a lot of other fields are using technology as well.

Big

- ▶ There's a chance that a big percentage of jobs will be taken over by intelligent systems, as they make for better employees and moreover, work for free.
- ▶ A big part of the study is to become a translator between the computer scientist and a big company.

Get

- ▶ People's life get supported by machines
- ▶ It is possible to get a job in different fields
- ▶ Students need to get forty points

We; our

- ▶ Computer Science is all about our interaction with information
- ▶ Artificial Intelligent will improve aspects of our life in ways we still cannot imagine
- ▶ As future creators of computer systems and networks we should constantly strive for ...

You

- ▶ But when you study A.I. you come to find out that artificial intelligence is a lot simpler but at the same time more practical.
- ▶ This study programme shows you the key for algorithm thinking, ...
- ▶ Computers are not only the PCs or desktops as you know them

Commas, colons and semicolons

- ▶ Artificial Intelligence mainly covers complex topics hinged on the usage of data, such as: Machine Learning, Dynamic Models, Statistics, Intelligent Systems and many more.
- ▶ Aside from knowledge a broad set of skills are taught; including but not limited to: ...
- ▶ In general humanity is trying to develop to his full potential every decade.
- ▶ Artificial intelligence (AI), is a field of computer science that focuses on ...

Comma splices

- ▶ The terms artificial intelligence and machine learning are commonly conflated, however, machine learning is a subset of artificial intelligence that aims to simulate the human learning process.
- ▶ Nowadays a lot of other fields are using technology as well, for example, a lot of hospitals use machines to improve our health care.
- ▶ One such area is the the study of information processing within digital computers, this includes the methods is which information is processed and the theory behind it.

Quoting and referring

Proper paraphrasing vs plagiarizing

A urine test given during the Vuelta a España showed that Chris Froome had twice the permitted level of the asthma medication salbutamol in his system. The four-times Tour de France winner and his employers, Team Sky, had hoped that the UCI would rule that there was no disciplinary case to answer. But the Legal Anti-Doping Services branch of the governing body has now rejected the initial explanations suggested by Froome and his team.

(From: <https://www.theguardian.com/sport/2018/mar/30/chris-froome-doping-investigation-tour-de-france>)

Proper paraphrasing vs plagiarizing (1)

Two acceptable paraphrases, with different levels of detail:

- ▶ Chris Froome had a too high level of an asthma medication in his urine during the Vuelta a España. Despite his and his team's hope that there would be no consequences, the anti-doping branch of the UCI has not accepted the team's account of the situation.
- ▶ Chris Froome and his team hoped that the positive test on an asthma medication during the Vuelta a España would not have any consequences, but the UCI has not accepted their account of the situation.

Proper paraphrasing vs plagiarizing (2)

A urine test given during the Vuelta a España showed that Chris Froome had twice the permitted level of the asthma medication salbutamol in his system. The four-times Tour de France winner and his employers, Team Sky, had hoped that the UCI would rule that there was no disciplinary case to answer. But the Legal Anti-Doping Services branch of the governing body has now rejected the initial explanations suggested by Froome and his team.

(From: <https://www.theguardian.com/sport/2018/mar/30/chris-froome-doping-investigation-tour-de-france>)

A plagiarized version:

- ▶ A doping test carried out while the Vuelta a España took place demonstrated that Chris Froome had twice the allowed level of an asthma medication in his body. The cyclist, who has won the Tour de France four times, and Team Sky, his employers, had wished that that UCI would say that there would be no investigation. However, the UCI's legal anti-doping services branch has now rejected the former explanations given by the team and Froome himself.

Paraphrasing properly

1. Read the passage and make sure you understand it
 2. Then put the passage away and write down what you remember
 3. Now put the two versions next to each other and check:
 1. Does your paraphrase capture the content of the original?
 2. Is your choice of words not too close to the original?
 3. If it is, can you quote? (i.e. are the words “quoteworthy”)
 4. If it is, can you rephrase?
-

HANDOUT

Exercise I

(Passage I and 2)

Passage 1

Passwords remain the weakest component of many important security systems, so there is a concerted push from many directions to supplant or supplement passwords with less-fragile security measures. While this push has had some effects, particularly in environments that require more security, it has failed to replace passwords—the vast majority of computer users still use passwords on a day-to-day basis.

(From: Hugh Wimberly & Lorie M. Liebrock, Using Fingerprint Authentication to Reduce System Security: An Empirical Study 2011, p. 1)

Passage I

Possible paraphrases:

- ▶ Wimberly and Liebrock claim that attempts to replace passwords with better security measures have so far had little effect.
 - ▶ Wimberly and Liebrock describe how using only passwords as a security measure is problematic, but that despite attempts to create safer security measures, passwords remain in wide use.
 - ▶ Wimberly and Liebrock claim that passwords are “the weakest component” of security systems, which has led to attempts to replace passwords or add other security steps. They also state that this has not had a large effect, and most people still only use passwords.
-

Passage 2

Google stores information on every app and extension you use. They know how often you use them, where you use them, and who you use them to interact with. That means they know who you talk to on Facebook, what countries are you speaking with, what time you go to sleep.

(Author: Dylan Curran, Source: *The Guardian*, <https://www.theguardian.com/commentisfree/2018/mar/28/all-the-data-facebook-google-has-on-you-privacy>)

Passage 2

Possible paraphrases:

- ▶ Curran explains that Google stores different types of information about users' habits from a range of sources.
 - ▶ Curran states that Google stores information about users' habits, based on frequency of use, location of use and interaction with other people.
-

Avoiding plagiarism

So, what is plagiarism?

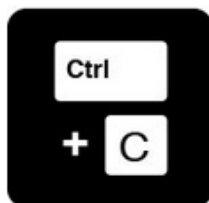

Handing in
work that you
didn't write
yourself

Copy + paste

As long as you put in the
reference, it's ok.

Right?

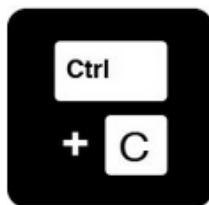

#1. CLONE

Submitting another's work, word-for-word, as one's own

#6. HYBRID

Combines perfectly cited sources with copied passages without citation

#2. CTRL-C

Contains significant portions of text from a single source without alterations

#7. MASHUP

Mixes copied material from multiple sources

#3. FIND - REPLACE

Changing key words and phrases but retaining the essential content of the source

#8. 404 ERROR

Includes citations to non-existent or inaccurate information about sources

#4. REMIX

Paraphrases from multiple sources, made to fit together

#9. AGGREGATOR

Includes proper citation to sources but the paper contains almost no original work

#5. RECYCLE

Borrows generously from the writer's previous work without citation

#10. RE-TWEET

Includes proper citation, but relies too closely on the text's original wording and/or structure

Using sources: possible problems (based on this course in previous years)

- ▶ Improper paraphrases
 - ▶ Too many quotations
 - ▶ Statements that require evidence but don't have a reference
-

Quoting and referring: overview

- ▶ Provide **references** for every bit of information in your text (and every opinion)
 - ▶ you need to build on what others have done before you
 - ▶ references provide support for observations
 - ▶ references provide a counterargument which you can then address
 - ▶ When you **paraphrase**, make sure you really use your own words
 - ▶ Write your paraphrase without looking at the original text
 - ▶ Always check against the original: is it not too close in choice of words?
 - ▶ Only **quote** when it's absolutely crucial to use the words of the original (e.g. definitions, characterizations)
-

Referencing style

Referencing styles for final assignment

For the assignments in this course, use either Harvard style or IEEE:

- ▶ <https://libweb.anglia.ac.uk/referencing/harvard.htm>
 - ▶ <https://pitt.libguides.com/citationhelp/ieee>
-

IEEE style, in-text references

Balluchi states that "Automotive electronic design is certainly one of the most attractive and promising application domains for hybrid system techniques" [1].

One important problem while implementing the fully autonomous calibration schemes is the backdrivability of the actuators [2], [3].

Many authors agree that the main advantages of randomized stochastic optimization algorithms is that since their input data are artificially randomized at every step, they have the convergence under 'almost arbitrary' perturbations and a small number of measurements of the loss function in iterations [4]-[7].

Harvard style, in-text references

- ▶ Smith (2013, p. 45) says that “syntax is crucial in language acquisition”.
 - ▶ Jones (2012), on the other hand, argues that it is semantics that plays the determining role.
 - ▶ There has been a debate on which aspect of language is most important in language acquisition (Smith, 2013; Jones, 2012).
-

HANDOUT

Exercise II

Harvard style

According to the Environment Agency _____, in 20 years time there will be 33 per cent more vehicles on our roads. There is conclusive evidence that road transport has a major impact on the environment. Traffic is responsible for 22 per cent of the UK's carbon dioxide output (Foley and Fergusson _____ and emits significant amounts of other air polluting gases such as carbon monoxide and nitrogen oxide _____ 1999) .

Cairns _____ p. 75) argues that although "fuel and vehicle developments have made a huge difference to local air quality", measures to reduce traffic will also be required if the Government is to achieve its targets on air quality. One such measure is congestion charging which, according to a recent study by _____), has been successful in reducing vehicle emissions in London.

Bibliographies

- ▶ Generally, the items to include are the following:
 - ▶ Name of author(s)
 - ▶ Year of publication
 - ▶ Book: Title of book + publisher
 - ▶ Article: title of article + title of journal
 - ▶ Often: page numbers
 - ▶ Only in specific cases: URL or DOI
 - ▶ Always check the guidelines for the required info and format.
-
