

Introduction to AI

Working Group Session 7

Final Working group

ANNETTE TEN TEIJE
MARK HOOGENDOORN

VRIJE UNIVERSITEIT AMSTERDAM
DEPARTMENT OF COMPUTER SCIENCE

TODAY

- Requirements for assignments
- Social event
- Study and career
- Other questions

POSTER (DEADLINE 21/10)

Part of your future work will be to promote yourself and your work. Usually you will be given very little time to convince a client or other researchers that you are working on an interesting and important problem, and it is crucial to be able to reduce your message to some strong but concise points, and to present it in an appealing way.

We want you to produce a poster that attracts a wide audience to the problem you want to solve. Make sure you identify both the general domain and the specific problem you want to address. Use strong visual means.

You can make your poster in A3-format (using Powerpoint) and submit it to canvas (pdf). Depending on the corona situation, we will held the poster session :

- physically, in which case you can print the poster on the printers in the NU building.
- remotely, in which case you will present the poster on Zoom.

VIDEO (DEADLINE 21/10)

In a video of maximum 90 seconds you will present the work of the first 7 weeks in a very condensed form. This video should cover all aspects relevant for Artificial Intelligence covered in the report (apart from the search for literature).

Make sure you:

- introduce the problem
- introduce the task
- explain how you will elicit the necessary information
- present a mockup of your "system"
- discuss how you will evaluate your system

Upload on YouTube, submit link

There is plenty of free software, and most smartphones and photo cameras can make videos. Do not worry about the technical quality of the video, your video will only be judged for its scientific and creative quality.

The video will be used in the semi-final of the "Best Intro AI project" competition. Fellow students can vote to select your project for final presentation (or not) on the basis of this video. So do your best to convince them.

Upload your video on Youtube and submit the link (we will create a playlist afterwards).

FINAL REPORT (DEADLINE 28/10)

- The report should consist of about 10 pages (in English).
- It should be written as a scientific document. We suggest you use the following (indicative) structure:
 - > Abstract (1/2 page): summarize each of the points below in 1 sentence.
 - > Introduction (1 page) what is this report about, what are the research questions, and what is the contribution of the report?
 - > Research Problem (2 pages): Describe and motivate the problem you want to address. This includes a description of the domain and the specific problem at hand. Think of an audience that is not familiar with the domain, so provide sufficient background to make it abundantly clear what your target is.
 - > Literature Review (3 pages): What has been done Provide an overview over the related literature, and a description of an approach to collect sufficient information from experts required to solve it.
 - > Approach (3 pages): how will you solve the problem? Focus on the algorithmic and interactive aspects of a piece of technology that might solve the problem. This technology does not need to exist, nor does it necessarily be realistic to expect that it can exist within the near future. Be bold, be creative, but make sure that the solution is somehow viable.
 - > Experimental Evaluation (2 pages): explain the evaluation you plan for your solution. Of course this is a proposal not a concrete evaluation, i.e. describe how will set up necessary experiments, how many people would you invite, which groups, which technologies and metrics you will use etc.
 - > Conclusion (1page): what did you do, and what did we learn? Are your research questions answered?
- Of courses, these are exactly the topics you worked on during the course, so you should reuse as much of the material as you deem relevant.
- It is highly desired that you use Springer style formatting in the style of the Springer Publications format for Lecture Notes in Computer Science (LNCS). For details on the LNCS style, see Springer's Author Instructions ([Links to an external site.](#)).
- It is highly recommended that you use Latex for this. With Overleaf ([Links to an external site.](#)) you have a very nice platform for writing Latex collaboratively. It is worth investing time in this. The easiest is probably to start from this Overleaf LCNS template.

AI 1st year social event

Friday Oct 28th (10:00-20:00)

Save the date!

- Social event end of P1
- Free lunch, dinner & drinks
- Best Intro AI project voting
- Hacking, coding & socialising
- Limited to 150 people!
- Coming? [Please register](#)

SOCIAL EVENT PROGRAM

- 10:00-10:30 Introduction
- 10:30-12:00 Session 1 (Sprint 1)
(Coffee at 10:30-11:30)
- 12:00-13:00 Lunch and Poster Session
- 14:00-15:30 Session 2 (Sprint 2)
(coffee 15:00-16:00)
- 15:30-16:00 Best project (video and voting)
- 16:00-17:30 Session 3 (Sprint 3)
- 17:30-18:00 Final presentations
- 18:00 - Dinner and drinks

STUDY AND CAREER

- First year students will have to follow 3 Study and Career sessions in period 2, and 3 sessions in period 3 to fulfill the Study and Career Learning objectives that incorporated in the course Bachelor Project Artificial Intelligence XB_40002. Submitting the assignment and the reflection for the Study and Career sessions is a requirement for finishing the BSc project.
- 15 November 2022 15:30 Bachelor Project Artificial Intelligence (HC)
- 22 November 2022 15:30 Bachelor Project Artificial Intelligence (HC)
- 13 December 2022 15:30 Bachelor Project Artificial Intelligence (HC)

OTHER QUESTIONS

- Reflection on lectures?
- How are the other courses coming along?
- Other questions?
